- Check if $n k \leq 3$, otherwise output no.
- Iterate over all three subset induced digraphs.

Tournaments

Lemma 2

Tournament on four or more vertices is not singly connected.

 Algorithm for SCVD in tournaments is implied trivially by the lemma.

- Check if $n k \leq 3$, otherwise output no.
- Iterate over all three subset induced digraphs.

The runtime of the algorithm is $O(n^3)$.

Definitions

Forward arcs. For a path $P = v_1 \dots v_i$ in digraph D, (v_i, v_j) is a forward arc with respect to P if j > i + 1.

Algo Lemma

SCVD in $\alpha\text{-bounded digraphs}$

Algo Lemma

Lemma (Algo Lemma)

For every $\alpha \in \mathbb{N}$, every α -bounded digraph with at least $\alpha(2\alpha + 4)$ vertices is not singly connected.

▲ロト ▲帰 ト ▲ ヨ ト ▲ ヨ ト ・ ヨ ・ の Q ()

SCVD in $\alpha\text{-bounded digraphs}$

Algo Lemma

Lemma (Algo Lemma)

For every $\alpha \in \mathbb{N}$, every α -bounded digraph with at least $\alpha(2\alpha + 4)$ vertices is not singly connected.

 The algorithm for SCVD trivially follows from Algo Lemma. It is exactly like SCVD in tournaments.

Proof Outline of algo lemma

Lemma (Algo Lemma)

For every $\alpha \in \mathbb{N}$, every α -bounded digraph with at least $\alpha(2\alpha + 4)$ vertices is not singly connected.

Assume not. Let D be α-bounded singly connected digraph with |V(D)| ≥ α(2α + 4).

Proof Outline of algo lemma

Lemma (Algo Lemma)

For every $\alpha \in \mathbb{N}$, every α -bounded digraph with at least $\alpha(2\alpha + 4)$ vertices is not singly connected.

- Assume not. Let D be α-bounded singly connected digraph with |V(D)| ≥ α(2α + 4).
- ► By Gallai Milgram, there is a path cover *P*, and maximal independent set *I* = {*v_P*|*P* ∈ *P*}.

Proof Outline of algo lemma

Lemma (Algo Lemma)

For every $\alpha \in \mathbb{N}$, every α -bounded digraph with at least $\alpha(2\alpha + 4)$ vertices is not singly connected.

- Assume not. Let D be α-bounded singly connected digraph with |V(D)| ≥ α(2α + 4).
- ► By Gallai Milgram, there is a path cover *P*, and maximal independent set *I* = {*v_P*|*P* ∈ *P*}.

• By averaging argument, there is a path P such that $|V(P)| \ge 2\alpha + 4$.
Proof Outline of algo lemma

SCVD in α -bounded digraphs

Proof Outline of algo lemma

・ロト ・ 日本・ 小田 ・ 小田 ・ 今日・

Proof Outline of algo lemma

► $|N[I] \cap V(P)| \le 2(\alpha - 1) + 4 + 1 = 2\alpha + 3$ (in the underlying undirected graph).

Proof Outline of algo lemma

► $|N[I] \cap V(P)| \le 2(\alpha - 1) + 4 + 1 = 2\alpha + 3$ (in the underlying undirected graph).

• There exists a vertex $v \in V(P)$ which is not adjacent to *I*.

SCVD in α -bounded digraphs

Proof Outline of algo lemma

► $|N[I] \cap V(P)| \le 2(\alpha - 1) + 4 + 1 = 2\alpha + 3$ (in the underlying undirected graph).

- There exists a vertex $v \in V(P)$ which is not adjacent to *I*.
- This contradicts our assumption that *I* is a maximal independent set.
